What is the difference between a module and an inverter?

Module - The cost to the installer of photovoltaic modules, as delivered. Inverter - The cost to the installer of equipment for converting direct current (dc) to alternating current (ac), as delivered. Energy Storage System (ESS) - The cost to the installer of adding an energy storage system, as delivered.

How do you convert kWh costs to kW costs?

The \$/kWh costs we report can be converted to \$/kW costs simply by multiplying by the duration (e.g., a \$300/kWh, 4-hour battery would have a power capacity cost of \$1200/kW). To develop cost projections, storage costs were normalized to their 2022 value such that each projection started with a value of 1 in 2022.

How many inverters does a PV system use?

The DC cables are connected to 19 utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.

What is the ESS inverter?

The ESS inverter is ac coupled with the PV inverter. The ESS system is assembled in the United States using domestic components except for the battery cells, which are imported from China and subject to 25% import tariff. The ESS producer receives a 45X tax credit of \$10/kWh for battery modules.

How many MW AC does an ESS battery storage system have?

When supplied with an energy storage system (ESS), that ESS is comprised of 80 pad-mounted lithium-ion battery cabinets, each with an energy storage capacity of 3 MWh for a total of 240 MWh of storage. The ESS cabinet includes a bidirectional inverter rated at 750 kW ac (four-hour discharge rate) for a total of 60 MW ac.

How much AC does a solar PV system produce?

The aluminum rails and module clamps are imported from China and subject to 25% tariff. Each module is paired with a microinverter rated at 330 W ac, giving the PV system a rated AC power output of 6.6 kW ac, which corresponds to an inverter loading ratio of 1.22.
