All black components are better than regular components

Is a white PC case better than a black PSU?

White looks kinda good but it's more expensive: (Funny this thread notification comes along and people saying white is better. I'm building my first PC and the only variant of the case I wanted was the white one. The white psu was also cheaper than the black so I decided to go white, but thinking it wouldn't look as good as black.

Should I choose a white case or a black case?

If your case is gonna be within direct sunlight (eg: by a Window),then a white casewould be a better choice over black. However,if the case is situated away from the Window,under a desk,or otherwise not in direct sunlight,then the colour pretty much doesn't matter.

Is black better than white?

Black is way easier to hide a wire or two,with white it's got to be clean and cable managed perfectly to look good. I love how sleek a glossy black build with no RGB looks,however seeing how bright a white build gets with all its RGB is just as astounding to me. I like having black complimented with white parts. Which case are u rocking ?

Why do people prefer white cases over black cases?

The reason is because I'm big on RGB,and white cases show off colors so much betterthan black cases. white = shows colours better black = cheaper I have always liked black builds a little bit more. Also kind of biased towards white components because of how ridiculously expensive they are.

What's the difference between white and black cases?

Other than that subjective difference, white v. black for electronics has pretty much always been a bit of a tug-o-war or see-saw. With PC cases, black has been dominant for some time, and more recently more white cases have been produced and get featured on instagram and merchant pages etc, so they are being "pushed" a little now.

Is a white case cooler than a black case?

Sign in here. This may be an odd topic but we know that the colour black absorb the most heat. So in theory a white or non-black case would be much cooler? Long time ago PC cases are typically grey or silver, then it switches to black, and now white cases are increasingly more popular (and inexpensive). Some p...

I have an industrial style (black and wood) so I like cases with an minimalistic mat black finish. For me the most important is that the case is cool (airflow), quiet ...

I"m building a PC, and I"m stuck deciding between a black or white build for the Fractal Design Meshify 2

case. I"ll be using the same parts regardless of the color choice, but ...

For regular components, trading or long range mineral scanner is usually easier. However for advanced components, the settlements near you will likely not have enough to satisfy your ...

All black/dark is best, in my opinion. The less distraction from the screen, the better. Right where it should be! There"s less sound distraction under a desk! It"s gonna look like an ancient tomb in ...

It"s been my anecdotal observation that for both Schiit and Denafrips, black is more desirable than silver. In the case of Schiit, that"s understandable because they are primarily ...

Note: My advice is amateur help/beginner troubleshooting, someone else can probably troubleshoot way better than me. - I do have some experience, and I can use google ...

Here is something that I didn"t know, but so far I have found the information listed at different sites. Heatsinks perform better when they are black. 4.8. Black surfaces Under ...

Thoughts on all black components in the o11 mini (snow edition) Never seen anybody do it yet, this is a thought I had more so because of how white parts are expensive where I live (all white ...

I have an industrial style (black and wood) so I like cases with an minimalistic mat black finish. For me the most important is that the case is cool (airflow), quiet and performs well.

So I went all black instead with an awesome case that I highly recommend : the Montech Sky Two, my first RGB build and it includes nice fans and a good RGB controller.

The net at the least always gives 10 components and when it gives you the quality and superb it gives you 5 of each component along with 5 regular components. Which ...

Laptops use compact hard drives that can withstand movement even during operation, and small memory modules and CPUs that require less voltage than regular components. In general, it ...

Gaming laptops overall just make better sense if you plan to do anything more than word processing. Arguably even competitive against professional machines for design work.

Just depends on what particular part you are looking at. Most people generally want black, so if they made too many white ones and they don"t sell - then white is cheaper. Supply ...

Military grade components will have a decent blend of all attributes, but a lower durability than say civilian or industrial. Scarcity and price will also be factors for military. Stealth components are ...

All black components are better than regular components

When I have bought audio components, I often ask the retailer or manufacturer which color is more popular (as well as any other options for the component). On color, they ...

Black or Silver... what do you like better for the look of your system? Okay, this might be a bit of a superficial question.... But what looks more appealing to you for the components in a system...

Black matches with basically every color, so it"s easy to switch to basically any theme/color mashup you want and it"ll look good for the most part. Some colors simply don"t look good in a ...

Considering white cases are easy to find, and most components are black, this should be pretty common. You can search through PCPP"s complete builds, I'm sure you can find on in there.
