What is double pane glass?

Double pane glass features two glass layers with insulating gas in between. An Insulated Glass Unit also contains a spacer, a desiccant substance, and a sealant. The glass can also incorporate Low-E coatings.

What is a double pane window?

Double pane windows are the industry standard, and you can find them in all window types, including double-hung, single-hung, casement, picture, bay windows, and more. A single pane window features one sheet of glass. Single pane windows are standard in older homes, especially those featuring wooden window frames.

Are double pane windows a good choice?

Double pane windows are the standard in today's new construction and replacement windows. They're energy-efficient, affordable, and long-lasting. If you're window shopping, you have many decisions, including style, frame material, and glass type. In most cases, going with a double-pane window makes more sense than single and triple-pane options.

Are double pane windows insulated?

Double pane windows are a common type of insulated glass unit. Low-emissivity or Low-E glass is glass that has been coated with a transparent substance that minimizes the amount of light that enters through the glass. Low-E glass reflects the sun's rays, reducing solar impact on the temperature of a property and reducing energy costs.

What is a double glazed window?

Between the glass is an intervening gas or air pocket to better insulate a room. This window is sometimes called a double-glazed window. Double-paned windows are now standard for both new construction and replacement windows. Triple-paned windows are sometimes recommended in environments with harsh weather for maximum insulation.

Is a triple pane window better than a double pane?

While a double pane window has two glass panels, a triple pane window has three. Triple pane windows offer superior energy efficiency, helpful in areas with extreme cold or heat. But with the extra energy efficiency comes a 10-20% higher price. It can take 30 years to recoup the cost of a triple pane over a double pane window.
