

How much electricity does Armenia produce a year?

Last year Armenia produced 8,907.9 GWh of electricity, up 16% from 2021. The vast majority came from thermal power plants in Yerevan and Hrazdan (43.5%) and the Metsamor Nuclear Power Plant (32%). Hydropower accounted for 21.8%, while solar stood at 2.7% and wind power at just 0.02%.

What percentage of Armenia's Energy is renewable?

Renewable energy resources, including hydro, represented 7.1% of Armenia's energy mix in 2020. Almost one-third of the country's electricity generation (30% in 2021) came from renewable sources. Forming the foundation of Armenia's renewable energy system as of 6 January 2022 were 189 small, private HPPs (under 30 MW), mostly constructed since 2007.

Where does Armenia's electricity come from?

Despite this progress, the majority of Armenia's electricity still comes from non-renewable sources. Last year Armenia produced 8,907.9 GWh of electricity, up 16% from 2021. The vast majority came from thermal power plants in Yerevan and Hrazdan (43.5%) and the Metsamor Nuclear Power Plant (32%).

What is Armenia's long-term energy strategy?

In its long-term strategy (up to 2040) for the energy sector, adopted in January 2021, the Armenian government identified the maximum utilization of renewable energy potential as a priority.

How big is Armenia's solar power?

In 2017, Tamara Babayan, a sustainable energy expert, estimated the potential of Armenia's distributed solar power at 1,280 MW and almost 1,800 GWh in annual generation.

How much wind power does Armenia have?

A 2003 study by the U.S. Department of Energy's National Renewable Energy Laboratory (NREL) estimated Armenia's land areas with "good-to-excellent" wind resource potential to be around 1,000 km². With a conservative assumption of 5 MW per km², the authors noted that the area could support almost 5,000 MW of potential installed capacity.

Renewable energy resources, including hydro, represented 7.1% of Armenia's energy mix in 2020. Almost one-third of the country's electricity generation (30% in 2021) came from renewable ...

In the past decades, Armenia has achieved significant progress in utilizing renewable energy sources, primarily through hydropower, which has ...

Armenia's energy sector institutional framework consists of state bodies responsible for policymaking and

regulation; state-owned enterprises responsible for power generation, and ...

This report analyzes the economic and financial viability of battery storage solutions to ensure the reliable and smooth operation of Armenia's power system in the context of an increasing share ...

Installed capacity is approximately 389 MW for annual generation of 943 GWh, covering 14% of domestic supply. Several small plants also produce wind power (4.23 MW), bioenergy (0.835 ...

In the past decades, Armenia has achieved significant progress in utilizing renewable energy sources, primarily through hydropower, which has contributed between a ...

Meta Description: Explore how the Yerevan Energy Storage Photovoltaic Power Station redefines renewable energy integration. Discover its technological breakthroughs, environmental impact, ...

Tesla is negotiating with the government of Armenia over supplying a grid-scale storage system, while Italy's grid operator revealed it is collaborating with the EV and smart energy tech maker ...

A flexible power system with storage technologies and increased connectivity with neighbouring countries are essential to accommodate growing renewable energy volumes. This newsletter ...

Energy management system based on economic Flexi-reliable operation for the smart distribution network including integrated energy The concept of a near-zero energy community energy ...

Armenia imports 81% of its primary energy supply and 100% of its fossil and nuclear fuels. These imports stem mainly from Russia and to a lesser extent also from Iran. Expansion in cross ...

ABSTRACT As the share of variable renewable energy generation increases, Armenia might need to install battery storage systems to ensure the reliable and smooth operation of its power ...

As the share of variable renewable energy generation increases, Armenia might need to install battery storage systems to ensure the reliable and smooth operation of its power system. The ...

Expected Outcome: The Government of Armenia will have access to technical and economic information to decide whether and how to move ahead with an energy storage Projects.

3 days ago; From January to July 2025, Armenia produced 5,557.6 million kWh of electricity, marking a 5.6% increase compared to the same period in 2024? according to the National ...

That's Armenia today. With aging infrastructure and growing energy demands, Armenian power plant energy storage isn't just tech jargon--it's become the nation's electricity ...

The main objective: of this study is to analyse the requirements of the electricity system to ensure its reliable and smooth operation of storages with the integration of large-scale variable ...

Installed capacity is approximately 389 MW for annual generation of 943 GWh, covering 14% of domestic supply. Several small plants also produce wind ...

Armenia electricity production by source According to International Energy Agency in 2015 electricity generation in Armenia increased since 2009 to nearly 8000 GWh, but still remains ...

Abstract: Armenia's energy security is profoundly influenced by its regional dependencies and cooperation, particularly concerning natural gas imports from Russia and ...
