

Bidirectional energy storage charging pile

What is bidirectional charging?

One relatively new approach to addressing this challenge is bidirectional charging. You might have read terms like Vehicle to Home or Vehicle to Grid, which are two specific forms of bidirectional charging. With this solution, the battery of an electric car is used as a mobile energy storage unit.

How can bidirectional charging improve our energy systems?

And in the case of vehicle-to-grid, allowing electric vehicles to discharge energy back to the grid, bidirectional charging can also stabilise the grid. Ultimately, this technology has the potential to improve the resilience and sustainability of our energy systems, making them more efficient and reliable.

Can bi-directional charging be a Mainstream Energy Solution?

Sigenergy is proud to be among the first to successfully implement bi-directional charging in a commercial setting. In partnership with NIO, a leading EV manufacturer in China, Sigenergy has demonstrated the viability of bi-directional charging as a mainstream energy solution.

Can bidirectional electric vehicles be used as mobile battery storage?

Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure.

Can bidirectional EVs be used as mobile storage?

In contrast to stationary storage and generation which must stay at a selected site, bidirectional EVs employed as mobile storage can be mobilized to a site prior to planned outages or arrive shortly after an unexpected power outage to supplement local generation or serve as an emergency reserve.

Is bi-directional charging the future of Energy Innovation?
