

What are photovoltaic systems & energy storage systems?

The energy transition and the desire for greater independence from electricity suppliers are increasingly bringing photovoltaic systems and energy storage systems into focus. Photovoltaic systems convert sunlight into electricity that can be used directly in the household or fed into the public grid.

What are Viessmann photovoltaic modules & energy storage systems?

Viessmann photovoltaic modules and energy storage systems are not only an efficient way to self-generate and use solar power, but they also integrate seamlessly into the ecosystem. For example, they can be combined with a Viessmann heat pump or charging station for electric vehicles.

How does a photovoltaic system work?

Photovoltaic systems convert sunlight into electricity that can be used directly in the household or fed into the public grid. An energy storage system stores surplus electricity temporarily and releases it again when required. This significantly increases self-consumption and reduces electricity costs.
