

Do 5G communication base stations have multi-objective cooperative optimization?

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a description model for the operational flexibility of 5G communication base stations.

What is the optimal ADN operation of 5G communication base stations?

Under the current technological level and market conditions, due to the natural contradiction between the above-mentioned economy and the realization of carbon emission reduction objectives, the optimal ADN operation of 5G communication base stations can be summarized as a typical multi-objective optimization problem.

What is the equipment composition of a 5G communication base station?

Figure 1 illustrates the equipment composition of a typical 5G communication base station, which mainly consists of 2 aspects: a communication unit and a power supply unit.

What are the operational constraints of 5G communication base stations?

The operational constraints of 5G communication base stations studied in this paper mainly include the energy consumption characteristics of the base stations themselves, the communication characteristics, and the operational constraints of their internal energy storage batteries.

What is the energy consumption of 5G communication base stations?

Overall, 5G communication base stations' energy consumption comprises static and dynamic power consumption. Among them, static power consumption pertains to the reduction in energy required in 5G communication base stations that remains constant regardless of service load or output transmission power.

Can communication and power coordination planning improve communication quality of service?

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve communication quality of service.

With the advent of the 5G era, mobile users have higher requirements for network performance, and the expansion of network coverage has become an inevitable trend. Deploying micro base ...

With the sharp development of mobile communication technology, the coverage area of existing base stations cannot meet the increasing demand of users, so it is significant to establish a ...

In this paper, the major work is to solve the "blind spot" of 5G existing network BSs. In other words, it aims to solve the signal coverage problem of weak coverage points on the ...

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve ...

The main research content of this paper is to study the information about the existing network BSs and weak signal coverage points in a certain area, idealize the BS coverage into a circular ...

A communications network is an organization of stations capable of intercommunications, but not necessarily on the same channel (JP 6-0). A message is any thought or idea expressed briefly ...

Wireless sensor networks (WSNs) have emerged as a backbone technology for the wireless communication era. The demand for WSN is rapidly increasing due to their major role in ...

In the world of wireless communication, the choice of channels for base stations plays a critical role in ensuring reliable service, minimizing interference, and optimizing ...

The authors present a method for planning a base station's position in a mobile communication system taking into account both the requirement to minimise the environmental ...

The Ministry of Industry and Information Technology issued the "Action Plan for Green and Low-Carbon Development of the Information and Communication Industry ( 2022-2025 )" [1] It is ...

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates communication caching ...

The 5G network has already been defined in mobile communication. As the use of millimeter-wave and THz bandwidth (B5G) restricts the cell sizes, the number of base stations increases ...

A Game Theoretic Analysis for Power Management and Cost Optimization of Green Base Stations in 5G and Beyond Communication Networks

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

Moreover, green energy source awareness of the society increases exponentially and governments start to change their power policies to promote green energy sources. Therefore, ...

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network ...

In this way, 6G not only provides essential network support for green infrastructure but also drives sustainable development practices. However, achieving green, low-carbon 6G ...

Highlights o A novel bi-level optimization model is constructed for 5G shared base station planning. o A variety of constraints involved in the real 5G network planning scenario is ...

This paper proposes two models for enhancing QoS through efficient and sustainable resource allocation and optimization of base stations. The first model, a Hybrid ...

Optimization Control Strategy for Base Stations Based on Communication Load Published in: 2024 5th International Seminar on Artificial Intelligence, Networking and Information ...

With the maturity and large-scale deployment of 5G technology, the proportion of energy consumption of base stations in the smart grid is increasing, and there is an urgent need to ...

In this paper, we investigate the joint optimization of base station (BS) location, its density, and transmit power allocation to minimize the overall network o
