

How does a small cell base station communicate with a core network?

The small cell base station communicates with the core network over a high-speed backhaul connection. Core network: The core network manages the overall operation of the small cell network, including authentication, authorization, and routing of user traffic.

What are the functions of a small cell base station?

It includes various functions such as the User Plane Function (UPF), Control Plane Function (CPF), and Session Management Function (SMF). Transport network: The transport network provides the high-speed connectivity between the small cell base station and the core network.

What is a medium-range base station?

Medium-range base stations, which are adapted from microcell scenarios for Outdoor deployment. Small cells support various frequency bands defined by 3GPP [TS38.104], including FR1 and FR2 bands, which may be licensed, shared, or unlicensed, depending on deployment.
