

Configure Pump Portable Power Supply

What type of power supply does a pump station need?

If you have any questions on your pump station application and design, contact us today! Emergency power supply for pump stations are typically a portable generator with a manual transfer switch or a permanently generator with an automatic switch.

How long does a sump pump run on a power station?

If the object you want to plug into a portable power unit is something that runs continuously at 800 watts, then the calculation is pretty straightforward: So if my sump pump were running all the time, the power station would power it for 54 minutes, but that's not how sump pumps work. A sump pump usually comes on for intermittent, brief periods.

Should you use a portable generator if a pump station is without power?

A portable generator is a good temporary solution to have when a pump station is without power during an emergency. With the manual nature of a portable generator, during a crisis someone must know the pump station has lost power from SCADA or otherwise.

How do you connect a generator to a pump station?

Then the maintenance person needs to go out to the pump station to physically connect the generator. Typically, the generator will connect with a cord and a reverse power receptacle. Then the power can be transferred by the three position disconnect manual switch.

Do you need a backup generator for a pump station?

This is primarily done with either portable backup generators with a manual transfer switch or a permanently installed backup generator with an automatic power transfer switch. A portable generator is a good temporary solution to have when a pump station is without power during an emergency.
