

Container outdoor power supply start-up alarm

What kind of alarm do I need for a shipping container?

For these situations we recommend the "MiniPir Container Alarm"; it has an external antenna. The vandal-resistant "puck" antenna is mounted on the outside, with the wire inwards. See also the page Mobeye Shipping Container alarm. The Mobeye intrusion series consists of the MiniPir and CMVXI-R Outdoor detector.

How many power supplies can be mounted in a 40ft container?

Power supplies <300kW can be mounted in only a single 40ft container, while greater powers can be achieved in multiple containers and connected upon delivery. Depending upon specifications, containerized power supplies may be stacked, or located side-by-side. Setup and testing or shut-down and packing can be achieved within a matter of days.

What are reefer container alarm codes?

First off, let's get familiar with what these codes are. Reefer container alarm codes are a series of messages displayed on the reefer controller panel. They're designed to indicate different types of operational errors or malfunctions within the system. Here's an example: An "A1" alarm code means there's a high return air temperature.

What types of power supplies can be provided?

A wide range of high voltage, CW DC, pulsed or modulated waveform outputs can be provided. The entire system is made to be entirely weatherproof. Power supplies <300kW can be mounted in only a single 40ft container, while greater powers can be achieved in multiple containers and connected upon delivery.

What causes alarm to be marked as inactive if supply voltage is correct?

Alarm will be marked as inactive in alarm list when supply voltage is correct. Alarm may then be deleted. The measured voltage is internal on the main controller and cannot easily be measured. Controller internal voltage reference fault. Unexpected behaviour in old software version. Defective power supply for main controller.

What is a power failure alert?

Power failure alerts are another vital type. They kick in when there's an interruption to power supply; this could be due to technical faults or accidental unplugging at port facilities or onboard ship. Remember: without power, refrigeration systems can't function and perishable goods may spoil quickly.
