

Disadvantages of Over-capacity Configuration of PV Inverters

Are oversized Power inverters bad?

An oversized power inverter can undermine the efficiency, cost-effectiveness, and longevity of your power system. While it might seem like a "safer" choice, improper sizing leads to hidden pitfalls. Here's a detailed breakdown of the risks, solutions, and answers to critical questions. Inverters achieve peak efficiency at 70-90% load.

What happens if you undersize an inverter?

When you undersize an inverter, you pair it with a system that can produce more power than the inverter is rated for. That can cause inverter clipping. Clipping happens when there is more DC power being fed into the inverter than it is rated for. When that happens, the inverter will produce its maximum output and no more.

Why does a distributed photovoltaic power station need an inverter?

Because the inverter accounts for only about 5% of the system cost, the number or power of the inverter is reduced by the overmatching of the components in the distributed photovoltaic power station system, and the investment income is very small, which also brings other problems, the specific analysis is as follows.

Can a solar array put out more power than an inverter?

According to the Clean Energy Council, you can have a solar array that can put out up to 30% more power than the inverter is rated for and remain within safe guidelines.

What is the maximum output capacity of a solar inverter?

That is to say, under the condition that the module capacity is equal to the solar inverter capacity, due to the objective existence of various losses, the actual maximum output capacity of the inverter is only about 90% of the rated capacity of the inverter, even when the light is the best, the inverter does not work at full load.

What is PV module capacity & solar inverter capacity ratio?

The PV module capacity and solar inverter capacity ratio are commonly referred to as capacity ratio. Reasonable capacity ratio design needs to be considered comprehensively in the light of the specific project.
