

Energy Storage System Supply Chain

Does grid energy storage have a supply chain resilience?

This report provides an overview of the supply chain resilience associated with several grid energy storage technologies. It provides a map of each technology's supply chain, from the extraction of raw materials to the production of batteries or other storage systems, and discussion of each supply chain step.

Are energy storage manufacturing facilities online?

Even so, the strain on the supply chain remains a pressing concern. This graphic, credited to the American Clean Power Association, depicts manufacturing facilities in the United States that are currently online or have been announced. The darker green shade shows energy storage manufacturing facilities that are online.

What is a battery supply chain?

The status of the United States in each segment is highlighted. As noted earlier, five of the technologies evaluated are batteries. In general, battery supply chains encompass raw material procurement, refining, component manufacturing (electrodes, electrolytes, and separators), end-use products, and recycling.

What is America's strategy to secure the energy supply chain?

The report "America's Strategy to Secure the Supply Chain for a Robust Clean Energy Transition" lays out the challenges and opportunities faced by the United States in the energy supply chain as well as the Federal Government plans to address these challenges and opportunities.

Why is a secure supply chain important?

The U.S. Department of Energy (DOE) recognizes that a secure, resilient supply chain will be critical in harnessing emissions outcomes and capturing the economic opportunity inherent in the energy sector transition. Potential vulnerabilities and risks to the energy sector industrial base must be addressed throughout every stage of this transition.

What is a unit for energy storage?

1 Units for energy storage are generally expressed in terms of the maximum amount of energy, e.g., watt-hours that can be made available over a specified amount of time (e.g., 2 hours), as the device is not generating energy but merely storing it for later use.
