

What is a containerized energy storage system?

A Containerized Energy-Storage System, or CESS, is an innovative energy storage solution packaged within a modular, transportable container. It serves as a rechargeable battery system capable of storing large amounts of energy generated from renewable sources like wind or solar power, as well as from the grid during low-demand periods.

Can I add more container units to my energy storage system?

Each container unit is a self-contained energy storage system, but they can be combined to increase capacity. This means that as your energy demands grow, you can incrementally expand your CESS by adding more container units, offering a scalable solution that grows with your needs.

How many MW can a battery energy storage system handle?

the load when needed, reducing the use of diesel generators. The battery energy storage system can also be used continuously to .6 MWh 1.1 MW / 1.2 MWh Battery warren ISO container. 2590 mm and other high humidity/corrosive applications Fire alarm Included as standard
