RP-98 Series LEEFI (EFI) Detonator LEEFI = Low Energy Exploding Foil Initiator (EFI) Packaged in a convenient TO-5 can with orientation tab. Inherently safer than hotwire detonators. ...

RDS-67 Series Military Remote Detonation Systems are field proven Wireless firing systems. These have diverse applications in Explosives disposal, ...

el of the firing device. The propellant has been adapted in order to generate a constant pressure on the projectile during the entire barrel procedure, to the greatest extent possible, as the ...

Hereby we introduce an extinguisher that can be installed in an energy storage cabinet and can cover 0.3 cubic meters of enclosed space, even though it only ...

A technology of firing device and energy storage spring, which is used in wellbore/well components, production fluids, earth-moving drilling, etc., can solve problems such as ...

The 1674 High Energy Remote Firing Device is our simplest, smallest and least expensive model. It provides enhanced reliability and degree of safety over the previous ...

By mating the shorting plug to the "Discharge" connector, the energy storage capacitor is completely and immediately discharged thus precluding inadvertent arming of the firing ...

The 1673 Remote Firing Device is guaranteed for 2 years (batteries - 1 year, spark tips excluded) against defects in workmanship and materials. If the equipment should fail during this period, ...

In this article, I will discuss the different types of energy storage devices to store electricity, how to store energy or how to save energy, equipment that can be utilized to store ...

Several competing design objectives for ESS can detrimentally affect fire and explosion safety, including the hot aisle/cold aisle layout for cooling efficiency, protection ...

We can design firing modules as over-voltage devices or command-to-fire devices, and can also include firing delay timers. Excelitas firing modules are designed to work in conjunction with ...

Hereby we introduce an extinguisher that can be installed in an energy storage cabinet and can cover 0.3 cubic meters of enclosed space, even though it only has 30 grams of agent.

An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such

as solar-thermal energy) to charge an energy storage system or device, which is ...

LORIS can be utilised for a wide range of military engineering applications including demolitions/ disposal and safe/reliable initiation of remote EED/pyrotechnic devices. Increased firing circuit ...

The input to the FS-9 Firing Module must be between 32 and 40 volts. This input charges a one microfarad capacitor. When this energy storage capacitor reaches 3000 volts, it is discharged ...

Explosive and pyrotechnic devices transform a small input of mechanical or electrical energy into a higher level of mechanical or thermal energy, which is then applied to do practical work on a ...

Fast Response Energy Storage describes several technologies characterized by the ability to provide or to absorb a high amount of electrical energy in a short period of time ...

An energy storage device refers to a device used to store energy in various forms such as supercapacitors, batteries, and thermal energy storage systems. It plays a crucial role in ...

In this article, I will discuss the different types of energy storage devices to store electricity, how to store energy or how to save energy, ...

Teledyne Energetics US specializes in advanced electronic safe & arm devices, detonators, and safety systems for military, space, and commercial sectors.

Teledyne Energetics UK provides high-precision and reliable safe arming and initiation solutions for aerospace, land, maritime, and space applications.
