Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

Why should we invest in a pumped storage power plant?

By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany. This investment is part of our previously announced strategy to invest in growth and transformation towards a greener business.

How will a pumped storage power plant contribute to the energy transition?

The company is making a significant contribution to the energy transition and is continuing its corporate transformation towards more renewable energy generation. By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany.

Should energy storage be undervalued?

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate--improving profitability and supporting sustainability goals.

What is a battery energy storage system (BESS)?

**CASE DESCRIPTION** This case consists of a utility-scale, lithium-ion, battery energy storage system (BESS) with a 150 MW power rating and 600 MWh energy rating; the system can provide 150 MW of power for a four-hour duration.

The way investment is measured across the energy spectrum varies, largely because of differences in the availability of data and the nature of expenditures. This document explains ...

Projected Costs of Generating Electricity 2020 - As identified in the 2019 IEA report Nuclear Power in a Clean Energy System and confirmed in this report, life extension of existing nuclear ...

Results may or may not line-up with statistical estimates, given differences in scope of estimation, statistical variation of actual plant characteristics, and temporal reporting issues.
