Should battery energy storage systems be standardized?

The rapid deployment of battery storage systems in homes, industries, and utilities necessitates standardization. Without a unified framework, systems may fail, pose safety risks, or operate inefficiently. The IEC standard for battery energy storage system provides benchmarks for:

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) have emerged as a core technology in this shift. These systems help balance energy supply and demand, improve grid stability, and support decarbonization. To ensure their safe and effective use, the IEC standard for battery energy storage system plays a critical role.

What types of batteries can be used in a battery storage system?

Application of this standard includes: (1) Stationary battery energy storage system (BESS) and mobile BESS; (2) Carrier of BESS, including but not limited to lead acid battery, lithium-ion battery, flow battery, and sodium-sulfur battery; (3) BESS used in electric power systems (EPS).

What are battery energy storage systems (BESS)?

The global transition toward renewable energy demands reliable energy storage. Battery Energy Storage Systems (BESS) have emerged as a core technology in this shift. These systems help balance energy supply and demand, improve grid stability, and support decarbonization.

What is the IEC standard for battery energy storage?

The IEC standard for battery energy storage system is the foundation for the safe and efficient growth of energy storage worldwide. By following these standards, stakeholders can ensure reliability, performance, and safety across all applications -- from residential rooftops to national grid infrastructure.
