

Fire resistance rating of energy storage container walls

What is a fire-resistant container?

In wildfire-prone areas, fire-resistant containers protect occupants from external fire threats, ensuring safe shelter until help arrives or the fire subsides. During emergencies, command centers must remain operational. Fire-resistant containers help protect crucial communications equipment and personnel during a fire event.

What are the fire and building codes for energy storage systems?

However, many designers and installers, especially those new to energy storage systems, are unfamiliar with the fire and building codes pertaining to battery installations. Another code-making body is the National Fire Protection Association (NFPA). Some states adopt the NFPA 1 Fire Code rather than the IFC.

Are shipping containers fire resistant?

Shipping containers are typically made from a mix of steel types, each chosen for strength and durability--but not all perform the same in fire. Here's a quick overview of the most common structural materials and how they relate to fire resistance:

What is a battery energy storage system container?

A Battery Energy Storage System container is more than a metal shell--it is a frontline safety barrier that shields high-value batteries, power-conversion gear and auxiliary electronics from mechanical shock, fire risk and harsh climates.

How do I know if my container is fire resistant?

If your container is being repurposed into a workspace, storage unit, or residence, check whether vents are protected and seals are rated for high temperatures. These small details make a big difference in a worst-case scenario. Fire resistance isn't just about what's visible--it's about what you can't see until something goes wrong.

Are there any problems with energy storage?

There have also been issues in the U.S. residential energy storage sector. For example, after five reported fires stemming from its RESU10 battery units, LG Chem issued product recalls in December of 2020 and again in August 2021. According to the Consumer Product Safety Commission, these fires resulted in property damage and one injury.
