Are string inverters a good option for a solar PV system?

Depending on what one's goals, budget, and preferences are, string inverters can be a great option for your solar PV system. Solar inverters change the power produced by your solar panels into something you can actually use. Think of it as a currency exchange for your power.

How do I choose the right solar inverter type?

There are two categories to consider when deciding on the right solar inverter type: the solar inverter technology, and the type of solar power system the inverter is for. String inverter: A string inverter is a single, standalone unit that converts power from a whole string (or strings) of solar panels.

What is a solar inverter?

A solar inverter or photovoltaic (PV) inverter is a type of power inverter which converts the variable direct current (DC) output of a photovoltaic solar panel into a utility frequency alternating current (AC) that can be fed into a commercial electrical grid or used by a local, off-grid electrical network.

What are the different types of solar inverters?

To recap, there are three kinds of inverters: string inverters, microinverters, and power optimizers. They all transform the power your solar panels generate from direct current (DC) to alternating current (AC). This makes the energy usable for your home. Here's a few things to look for when shopping for inverters...

What is a fixed string voltage inverter?

Fixed string voltage delivers broad, real-world advantages. With SolarEdge TerraMax inverters and H-Series Power Optimizers, you get: Think of it as the Swiss Army knife of PV system design -- a versatile tool that helps you build smarter, more efficient solar projects from the ground up. Watch the explainer video [here](#).

Which solar inverter is best for You?

Ultimately, best inverter for you depends on your roof shape and size, nearby trees, how much energy you need, and your budget. To recap, there are three kinds of inverters: string inverters, microinverters, and power optimizers. They all transform the power your solar panels generate from direct current (DC) to alternating current (AC).
