Can flywheel energy storage be commercially viable?

This project explored flywheel energy storage R&D to reach commercial viability for utility scale energy storage. This required advancing the design, manufacturing capability, system cost, storage capacity, efficiency, reliability, safety, and system level operation of flywheel energy storage technology.

What is a flywheel energy storage system?

Flywheel energy storage systems are widely used in space, hybrid vehicles, military field, and power quality applications. In these fields, they function as energy storage and attitude control systems. Space stations, satellites, and aircraft are the main application fields in space.

Does national highways have a flywheel energy storage system?

National Highways is partnering with Levistorto test our Flywheel Energy Storage System (FESS) alongside batteries and solar installations. We're pleased to be working with Ansys and benefitting from their Startup Programme.

What is the Flywheel Energy Storage System (FESS)?

The Flywheel Energy Storage System (FESS) is a technology developed under collaboration between GKN and Dstl to demonstrate an energy storage option for the Royal Navy's most advanced ships. It is based on Le Mans motor-sport technologies and was originally developed by the Williams F1 team.

Can flywheels save energy?

Installing 100 MW's worth of flywheels used for distribution can reduce demand charges by \$36 million and provide \$8 million of energy savings a year since the FESS can eliminate mid-day peak and evening peaks of electricity use. Lithium battery technology can only do one peak reduction a day.

Unlike battery systems needing more TLC than a newborn, flywheel O& M costs average \$8/kW-year versus \$25+ for lithium-ion. That's like comparing a Honda's maintenance ...
