What is a flywheel energy storage system?

Fig. 1 has been produced to illustrate the flywheel energy storage system, including its sub-components and the related technologies. A FESS consists of several key components: (1) A rotor/flywheel for storing the kinetic energy. (2) A bearing system to support the rotor/flywheel.

Can flywheel energy storage be commercially viable?

This project explored flywheel energy storage R&D to reach commercial viability for utility scale energy storage. This required advancing the design, manufacturing capability, system cost, storage capacity, efficiency, reliability, safety, and system level operation of flywheel energy storage technology.

What is a flywheel/kinetic energy storage system (fess)?

Thanks to the unique advantages such as long life cycles, high power density, minimal environmental impact, and high power quality such as fast response and voltage stability, the flywheel/kinetic energy storage system (FESS) is gaining attention recently.

Why are high-strength steel flywheels a good choice?

High-strength steel flywheels have a high energy density(volume-based energy) due to their high mass density. Furthermore,they are superior to composite ones regarding thermal conductivity and design data availability,such as SN curves and fracture toughness.

How do you calculate the energy capacity of a flywheel?

The following equations describe the energy capacity of a flywheel: (2) $E_m = \frac{1}{2} I \omega^2$ (3) $E_v = \frac{1}{2} \rho V \omega^2$ where η is the safety factor, λ the depth of discharge factor, γ the ratio of rotating mass to the total system mass, σ the material's tensile strength, K the shape factor, and ρ the density.

Are flywheel-based hybrid energy storage systems based on compressed air energy storage?

While many papers compare different ESS technologies, only a few research [152,153] studies design and control flywheel-based hybrid energy storage systems. Recently, Zhang et al. present a hybrid energy storage system based on compressed air energy storage and FESS.
