What are the benefits of accelerated energy storage in Germany?

The benefits of large-scale energy storage and the flexibility it brings to renewable-powered energy systems are easy to understand but often difficult to measure. The value of an accelerated storage rollout in Germany is staggering. This has been confirmed by a study by the German energy consultancy Frontier Economics.

What is the future role of battery storage in Germany?

Dr. Christoph Gatzert, Director at Frontier Economics, views the study results as clear indicators of the future role of storage in Germany: "Large-scale battery storage is critical for the energy transition in Germany."

Does Germany have a strategy for energy storage?

The findings underline the urgency for a fast implementation of the German government's strategy for electricity storage, published in December 2023. Germany often prides itself on being a pioneer and role model for the energy transition. Indeed, Germany was an early adopter and market leader in solar and wind in the 2000s and the early 2010s.

How much does Germany spend on EV and stationary battery research?

Public research and development incentives for EV and stationary battery research amount to between EUR 80 million and EUR 85 million every year. As the European lead market in the energy transition age, Germany provides the opportunity for companies to develop, test, define and market new energy storage solutions.

Is Germany a good place to invest in energy storage?

While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing industry. The country stands out as a unique market, development platform and export hub.

What is the value of an accelerated storage rollout in Germany?

The value of an accelerated storage rollout in Germany is staggering. This has been confirmed by a study by the German energy consultancy Frontier Economics. Storage capacity will grow 40-fold to 57 GWh by 2030 with a cumulative power rating of 15 GW, leading to EUR 12bn added economic value by 2050.
