How long do GRP graphene power batteries last?

Our GRP Graphene Power batteries can withstand over 20,000 charge/discharge cycles without significant degradation, resulting in a significantly longer lifespan. This is two to three times as much as a conventional battery. The minimum warranty we provide is 15 years and 20,000 charge cycles.

Are graphene batteries better than lithium batteries?

Revolutionizing energy storage with advanced nanomaterials. Our graphene batteries offer charging speeds that are 3 to 6 times faster, a lifespan that is 2 to 3 times longer, and a range increase of 1.3 to 1.8 times compared to traditional Lithium batteries. Additionally, they maintain safety even at extreme temperatures of up to 350°C.

What is a GRP graphene power telco battery?

The GRP Graphene Power telco battery is a significant leap forward in energy storage technology, carefully designed for the exact needs of telecom/data base stations and data warehouses. The system is designed for large-scale energy storage and uses Super Capacitor battery cells.

Why should you choose GRP graphene power batteries?

The GRP Graphene Power batteries can charge and discharge quickly, making them suitable for applications that require multiple charges/discharges per day. Combined with long lifespan and high cycle counts, this also offers significant economic advantages.
