

In this article, a novel control method of the grid-connected inverter (GCI) based on the off-policy integral reinforcement learning (IRL) method is presented to solve two-stage ...

Distributed generators are playing a vital role in supporting the grid in ever-increasing energy demands. Grid code regulation must be followed when integrating the ...

Dual loop current control structure is yet another method that was introduced recently to improve the current regulation in the dq frame under non-ideal grid conditions. The dual loop structure ...

Grid-forming inverters play a vital role in connecting renewable energy sources to the grid, and maintaining stable output voltage is essential ...

TL;DR: The proportional-resonant (PR) control method of the three-phase grid-connected inverter is proposed in this paper, where the conventional PI controller is replaced by PR controller, ...

The mathematical model of three-phase LCL inverter has coupling term in dq coordinate system. At the same time, the traditional proportional integrate (PI) cont

This paper presents a novel dual-loop power control strategy composed of a power outer loop and a current inner loop. The outer loop regulates the grid-connected power. The ...

To solve these problems, a dual-current active damping control strategy based on the inverter-side current and grid-connected current feedback for GCI-LCL is proposed in this ...

The control of grid-connected inverters has attracted tremendous attention from researchers in recent times. The challenges in the grid connection of inverters are greater as ...

This paper has analyzed in detail the implementation principles and process of the three-phase LCL grid-tied inverter, and has adopted the dual closed-loop feedforward control ...

A complete small-signal model for a multiple inverter-based microgrids with the proposed control structure is presented in order to assess system stability using eigenvalue ...

A nonlinear dual-loop H<sub>∞</sub> controller is presented in this paper synthesized with linear matrix inequality (LMI) method with primary objectives of generating switching signals ...

The dual-feedback control combining inverter current control and capacitor-current active damping is widely

# Grid-connected inverter dual-loop

applied for LCL-type grid-connected inverters. This paper ...

A detailed description about the process of proposing control strategy, mathematical modeling and decoupling control of grid-connected inverter in the DQ coordinate system, and the design...

A novel repetitive dual-loop control scheme of a grid-connected inverter with an LCL filter is proposed in this paper to realize precise control of grid-connected inverters.

This paper proposes a novel bus voltage control strategy based on LADRC, taking the grid-connected DC microgrid as the backdrop and the bidirectional grid-connected inverter ...

Discover a groundbreaking method for improving efficiency and power supply quality in LCL type grid-connected inverters. Explore the mathematical model, decoupling control, and dual-loop ...

The topology of interleaved inverters is preferred over conventional two-level inverters because of reduced current harmonics due to its ripple cancellation effect and high power rating through ...

Renewable energy sources (RESs) generally connected with electric power system via power electronic interface. This paper presents a reactive power and voltage ( $Q/V$ ) control strategy of ...

The proposed control strategy is based on the use of a phase locked loop to measure the microgrid frequency at the inverter terminals, and to facilitate regulation of the in-verter phase ...

Aiming at the resonance peak problem existing in the LCL type three-phase photovoltaic inverter grid-connected system, this paper proposes a dual current contro

In this reference, the relationships between the inverter-side and grid-side currents of a grid-connected inverter under active and reactive current injection are derived and a ...
