

Guinea High Frequency Inverter

What is the difference between sigineer HF and low-frequency inverters?

The Sigineer low-frequency inverters can output a peak 300% surge power for 20 seconds, while high-frequency inverters can deliver 200% surge power for 5 seconds, check our HF solar power inverters. Low-frequency inverters take power impact through its big transformer which acts like a surge relief for the circuit.

What is a high frequency inverter?

The high frequency inverter can deliver the same power at higher frequency with a much smaller and lighter transformer, as a result, the HF inverter is often called transformer-less inverter, or TL inverter.

What is a low frequency inverter?

Both of the two type of inverters can be built with utility charger or solar charger and be called "inverter charger". Here is the major difference of them: Thanks to the heavy-duty transformer, low frequency inverters have much higher peak power capacity and reliability.

What is the difference between high frequency and low frequency inverters?

Here is the major difference of them: Thanks to the heavy-duty transformer, low frequency inverters have much higher peak power capacity and reliability. The transformer handles higher power spikes with longer duration than high-frequency inverters when it comes to driving inductive loads such as electric motor, pump, compressor, air conditioners.
