

Could lift energy storage technology be a viable alternative to long-term energy storage?

Conclusion Lift Energy Storage Technology (LEST) could be a viable alternative to long-term energy storage in high-rise buildings. LEST could be designed to store energy for long-term time scales (a week) to generate a small but constant amount of energy for a long time.

What is Lift Energy Storage Technology (LEST)?

Lift Energy Storage Technology (LEST) is a gravitational-based storage solution. It stores energy by lifting wet sand containers or other high-density materials using autonomous trailer devices. The system requires empty spaces on the top and bottom of the building.

What is a long-term energy storage system (LEST)?

LEST is a long-term energy storage system designed to store energy for extended periods (up to a week) to generate a small but constant amount of energy for a long time. This small but constant electricity generation could be combined with other storage technologies, such as batteries, to balance short-term variations of electricity demand, solar and wind generation.

What time scale can LEST store energy for?

LEST could be designed to store energy for long-term time scales (a week) to generate a small but constant amount of energy for a long time. This paper concludes that Lift Energy Storage Technology could be a viable alternative to long-term energy storage in high-rise buildings.

What is the installed capacity energy storage cost of LEST?

The installed capacity energy storage cost of LEST is 21-128 USD/kWh. LEST is a decentralized solution for energy storage with daily to weekly cycles, based on the operation of lifts in high-rise buildings.

What is the proposed arrangement for the lift energy storage system?

An example of the proposed arrangement is presented in Table 1. Energy is stored as potential energy by elevating storage containers with an existing lift in the building from the lower storage site to the upper storage site. Electricity is then generated by lowering the storage containers from the upper to the lower storage site.
