

How good is the outdoor power supply in Guyana

What type of electricity is used in Guyana?

The electricity sector in Guyana is dominated by Guyana Power and Light (GPL), the state-owned vertically integrated utility. Although the country has a large potential for hydroelectric and bagasse -fueled power generation, most of its 226 MW of installed capacity correspond to thermoelectric diesel-engine driven generators.

How much power does Guyana have?

Installed power generation capacity in Guyana in 2007 was 226 MW or 0.4 kW per capita, which is lower than in other countries in the region and is hardly sufficient to cover the current demand for electricity in the country. Most electricity generation uses Diesel engines to drive generators.

Why are electricity prices so high in Guyana?

Electricity prices in Guyana are the third highest in the Caribbean due in large part to the country's reliance on expensive imported oil for electricity generation. At present the cost of fuel accounts for up to 60 percent of the total cost of electricity generation.

How can Guyana generate electricity based on renewable resources?

Guyana has opportunities for electricity generation based on renewable resources linked to its large sugar industry. Electricity can be generated using bagasse, a by-product of sugar production, as basic fuel for thermoelectric facilities.

What is the energy policy of Guyana?

The "Energy Policy of Guyana," completed in 1994, advocates the replacement of imported petroleum, as far as possible, by indigenous renewable energy sources. Increased and more efficient use of domestic energy resources, primarily hydropower and bagasse for electricity generation, is envisaged to contribute significantly in this regard.

Does Guyana have a potential for hydropower generation?

Guyana has a massive but yet unrealized potential for hydropower generation. Hydropower generation capacity has been estimated at 7,600 MW, that is, more than 30 times the current installed capacity in the country.
