Can fixed energy storage capacity be configured based on uncertainty of PV power generation?

As PV power outputs have strong random fluctuations and uncertainty, it is difficult to satisfy the grid-connection requirements using fixed energy storage capacity configuration methods. In this paper, a method of configuring energy storage capacity is proposed based on the uncertainty of PV power generation.

Why is high capacity energy storage important for PV power generation?

PV power generation adversely affects the economic, safe, and reliable operation of power systems [3,4]. High-capacity energy storage is a key technology in addressing the uncertainty of PV power generation that introduces fluctuations in the grid [5,6].

Why is energy storage important in a PV plant?

An energy storage system can respond to dynamic energy changes in a timely manner, effectively absorbing and releasing energy to mitigate grid fluctuations. The capacity configuration of an energy storage system has an important impact on the economy and safety of a PV plant.

What is energy storage capacity configuration?

The energy storage capacity configuration is the one Scan for more details Honglu Zhu et al. Research on energy storage capacity configuration for PV power plants using uncertainty analysis and its applications 609 of the hotspots in current study [8, 9, 10].

Why is it important to compensate for photovoltaic (PV) power forecast errors?

Compensating for photovoltaic (PV) power forecast errors is an important function of energy storage systems. As PV power outputs have strong random fluctuations and uncertainty, it is difficult to satisfy the grid-connection requirements using fixed energy storage capacity configuration methods.

How do energy storage systems compensate for PV power forecast errors?

Compensating for PV power forecast errors is an important function of energy storage systems [16,17]. The capacity of an energy storage system is calculated based on the PV power forecast; an energy storage device is used to compensate for the power forecast error, effectively reducing the loss caused by the PV power forecast error.
