What voltage do I need for outdoor lighting?

As previously stated, there are two voltage options for outdoor illumination: low voltage (12V) and line voltage (120V). High voltage, line voltage, or standard voltage are all terms used to describe 120V, which is the voltage most households directly get. All 120V connections must be made by a certified electrician in most localities.

What is a standard voltage for a home?

In American homes, the standard voltage supply that travels from your local utility substation to your home is 120 Volts. It is commonly referred to as "line voltage" by electricians, the US National Electrical Code (NEC), and other industry experts. Nearly all indoor residential light fixtures and appliances in the U.S. run on line voltage.

Why do outdoor lights use line voltage?

Line-voltage outdoor lighting fixtures are often large and produce a significant amount of light. The voltage loss on a lengthy series of lights has often been used as a reason for utilizing line voltage.

Is it safe to use a 12 volt outlet for landscape lighting?

Since the voltage level is substantially lower than a typical electrical outlet, this conversion makes your lighting system safe to install and maintain. The safest option for powering your residential landscape lighting is 12V. A person can die if exposed to 120 volts.

What is the safest voltage for landscape lighting?

The safest option for powering your residential landscape lighting is 12V. A person can die if exposed to 120 volts. If you or a family member come into touch with the considerably lower 12V, you or they will only receive a little shock.

Which is better 12V or 120V outdoor lighting?

When there is a requirement to light large areas with a lot of light output, 120V outdoor lighting is most commonly employed in commercial or security scenarios. Meanwhile, 12V is the safer and better option for household landscape lighting.
