How much does it cost to build an energy storage system?

Enel X referred to a recent survey of energy storage systems report that found they typically cost US\$1 million per megawatt to build. "We are purchasing it, we're building it together with subcontractors, and we'll own and operate the system on the behalf, collectively, of Imperial and ourselves," Martin said.

How to calculate power storage costs per kWh?

In order to accurately calculate power storage costs per kWh, the entire storage system, i.e. the battery and battery inverter, is taken into account. The key parameters here are the discharge depth [DOD], system efficiency [%] and energy content [rated capacity in kWh]. ??? EUR/kWh Charge time: ??? Hours
