

How to calculate the rated power of the battery cabinet

How much power does a cabinet use?

When planning for power redundancy, each circuit (primary and redundant) must be sized to handle the total load of both in case one fails. We find that the cabinet's equipment is pulling 1,872 watts (almost 1.9 kilowatts). Make sure to leave wiggle room for "power creep," as all IT equipment consumes more power over time.

How do I calculate power requirements for my colocation cabinet equipment?

We're the Summit team - cloud geeks, tech tinkerers, and security sleuths on a mission to keep your business running smoothly in and out of the cloud. Learn how to calculate the power requirements for your colocation cabinet equipment using a basic formula: $\text{amps} \times \text{volts} = \text{watts}$.

How to calculate the voltage of a battery in a series?

Even if there are various technologies of batteries the principle of calculation of power, capacity, current and charge and discharge time (according to C-rate) is the same for any kind of battery like lithium, LiPo, NiMH or Lead accumulators. To get the voltage of batteries in series you have to sum the voltage of each cell in the series.

How do I find out what my power requirements are?

There are many ways to find out what your power requirements are, but no matter what method you use, all computations involve three electrical concepts: To calculate power draw, these electrical concepts are applied to a simple formula: This formula determines how much energy a piece of equipment uses at a given moment.

What does C-rate mean in a battery?

C-rate is used to scale the charge and discharge current of a battery. For a given capacity, C-rate is a measure that indicates at what current a battery is charged and discharged to reach its defined capacity.

Do you know the maximum power required?

Knowing the maximum power required provides a base to factor in how the equipment is used and how much real-world power needs to be provisioned. It's important to note, however, that IT equipment rarely reaches its maximum power limit. At Summit, we guarantee 100% uptime on power (and bandwidth!).
