

India's grid-side energy storage policy

Are energy storage systems suitable in the Indian power grid?

porated in the Indian power grid. In this article, we analyse the different energy storage systems, their applications in the grid and key policy recommendations on the suitability of energy storage in the grid. The key policy recommendations include the use of energy storage system as a generation, transmission,

How can India improve grid stability?

India has also grown its international partnerships to secure more funding for storage research, such as the Indo-US Joint Clean Energy Research and Development Center (IUSSTF) and its equivalent with the UK (JUICE). Both of these centers research the potential for storage to improve grid stability.

How can Indian policymakers broaden the role of energy storage?

If Indian policymakers want to broaden the role of energy storage in the power system, an important first step is to include energy storage in national energy policies and programs.

What are smart grids & energy storage?

Smart grids and energy storage are two key technologies for adding the required flexibility to our future energy system. In most situations, these two technologies complement and supplement each other very effectively. As of now, smart grid projects worth US\$19.6 billion have been sanctioned in over 13 states in India.

Should energy storage be regulated in India?

India's existing regulations present a useful framework for enabling energy storage deployment; however, current regulations that explicitly restrict storage from providing services or earning revenue for those services present a barrier to maximizing the cost-effective value of storage investments.

How much ESS is pumped in the Indian grid?

tribution aspects of the grid. Currently, there is a limited presence of ESS in the Indian grid. Of this, a major share (~96%) is contributed by pumped hydro energy storage. Though there are different types of storage options for grid-scale applicati

For integrating such large-scale renewable capacity into the grid, new investments in the range of USD 1.2 - 1.6 trillion would be needed by 2050 to build generation capacity and energy ...

This report provides an outlook on smart grid and energy storage sectors in India, key stakeholders involved, regulatory and policy scenarios, government initiatives, technology ...
