

Install a booster module for outdoor power supply

What is a booster power supply?

The 10 Amp and 6.5 Amp Booster Power Supplies (BPS) are designed to extend a fire alarm panel's signaling capacity. The Booster can be connected to existing Class A or Class B Notification Appliance Circuits (NACs) or activated via Signature Series modules. There are four independent 3.0 Amp NAC circuits supervised in a non-alarm condition.

What is a 3-bps/M booster power supply?

Page 1 The 3-BPS/M (-230) and 3-BBC/M (-230) booster power supplies are used to provide additional power over and above that of the 3-PPS/M (-230). Each model is composed of a heat sink assembly and a monitor module. The monitor module plugs into the rail and the heat Power Supplies sink assembly mounts onto the rail chassis.

How many booster modules are allowed per NAC?

A maximum of 10 modules are allowed per NAC. The maximum total for parallel EOL's is 4.7 K. 14 Booster Power Supply Manual Out to EOL or next device UL Listed EOL 15 K EOL 15 K NAC Circuit From existing fire alarm panel notification circuit or CC1 module

What is a booster power supply trouble relay?

10 Booster Power Supply Manual Trouble relay wiring The Booster Power Supply has a Form C trouble relay that provides a normally open and normally closed contact. The trouble relay will deactivate under any trouble condition. A 16-second delay is used on the trouble relay for AC fail and brownout troubles.

Do horns and strobes need a booster power supply?

Unless the fire alarm system is for a small building, the horns and strobes use more current than the FACP can provide. Something is needed to provide this extra electrical current. Known by many different names from many different manufactures, the Booster Power Supply (BPS) or Signal Power Expander (SPX) provides this extra current.

How does a booster power supply or signal power expander work?

A Booster Power Supply is a power supply for horns, strobes, bells, etc. It is turned on using a "trip circuit". When it is not turned on, it performs a continuity check of the output circuits to the horns, strobes, bells, etc.
