

Inverter 210 voltage

What is Apollo S-210 series solar inverter?

APOLLO S-210 series is stand-alone bidirectional inverter which can operate in inverter mode and rectifier charge mode. It provides highest reliable for stand-alone solar electrification system with capability to receive AC supply from generator.

What is a stand-alone solar inverter?

The inverter controlled the operation by microprocessor. The significances of this stand-alone inverter are to supply pure sine wave voltage with low harmonic distortion and to indicate the operating status of inverter to user with LED indicators and suit for stand-alone solar power system where AC power output is needed.

What is inverter mode & how does it work?

In the inverter mode, it converts the DC from the battery into AC electricity to supply to AC appliances. When it automatically detects availability of AC supply from the generator or the electricity grid, it will change mode into rectifier charger to charge the battery.

How a solar inverter works?

It provides highest reliable for stand-alone solar electrification system with capability to receive AC supply from generator. The inverter automatically detects availability of AC power supply from the generator and change operation to rectifier charge mode in order to charge battery and supply AC power from generator to AC appliances.
