

Is Huawei's lithium battery a solid-state battery

Does Huawei have a sulfide battery?

Huawei has filed a patent detailing a sulfide-based solid-state battery design with energy densities between 180 and 225 Wh/lb, roughly two to three times higher than today's typical electric vehicle batteries.

How much does a Huawei battery cost?

Furthermore, the high production costs, which are currently between 8,000 and 10,000 yuan per kWh (about 1,100-1,400 USD), often prevent mass-market adoption. Huawei patents solid-state battery with 3,000 km range and 5-minute charge, promising breakthrough energy density and fast charging.

Is Huawei a good battery company?

If these claims are accurate, Huawei would have a huge advantage in energy density and charging speed compared to other automakers and tech companies that are researching solid-state batteries. Assuming everything shakes out, SynergyFiles.com points out this could spell trouble for rival companies.

Does Huawei make power batteries?

While Huawei does not manufacture power batteries, it has shown increasing interest in upstream battery materials. Earlier in 2025, the company filed a separate patent on the synthesis of sulfide electrolytes -- a key material known for its high conductivity but also high cost, sometimes exceeding the price of gold.

What is Huawei's new EV battery?

Huawei's breakthrough is based on a nitrogen-doped sulfide solid-state battery, which claims to reach energy densities between 400 and 500 watt-hours per kilogram (Wh/kg). That's about 2 to 3 times more than the energy density of most current lithium-ion EV batteries.

Will Huawei's new battery improve energy storage?

In an effort to improve its energy storage, Huawei has submitted a patent application for a battery with a 3,000-kilometre range and a five-minute charging time. Compared to traditional lithium-ion cells, the new sulphide-based solid-state battery will have energy densities between 400 and 500 Wh/kg, or two to three times higher.

Huawei has stepped up its ambitions in advanced energy storage with a patent for a sulfide-based solid-state battery that offers driving ranges of ...

Huawei is the latest in a growing list of automakers and tech companies that are exploring the possible benefits of fitting an EV with solid-state batteries, with the likes of BMW, ...

Huawei is on course to release a dry solid state battery with energy density between 400 and 500 Wh/kg, with

Is Huawei's lithium battery a solid-state battery

a full recharge in 5 min

Huawei has recently filed a new patent for solid-state battery technology, marking a significant step in the energy storage field. The aim of ...

Huawei has filed a patent for a new type of solid-state electric vehicle (EV) battery that could significantly change the future of clean transportation. The technology promises a ...

The all-solid-state battery technology prevents the settling of polysulfides, which often degrade battery capacity in traditional lithium-ion ...

Huawei has stepped up its ambitions in advanced energy storage with a patent for a sulfide-based solid-state battery that offers driving ranges of up to 3,000 kilometres and ultra ...

Huawei has filed a patent detailing a sulfide-based solid-state battery design with energy densities between 180 and 225 Wh/lb, roughly two to three times ...

Chinese technology powerhouse Huawei is setting its sights on one of the most promising and most elusive breakthroughs in clean transportation: ...

Huawei has filed a patent for a solid-state battery with extremely a high energy density and charging speeds. The announced range of up to 3,000 kilometers (1,864 miles) ...

Huawei has developed solid-state battery tech that could make EVs go further and charge faster. Cells have triple the energy-density of li-ion ones and could theoretically give ...

Huawei has filed a patent for a new type of solid-state electric vehicle (EV) battery that could significantly change the future of clean ...

Huawei has recently issued a new patent regarding solid-state battery tech. It would be a wonderful implementation in the energy storage sector. It will further act as a vital ...

Chinese technology powerhouse Huawei is setting its sights on one of the most promising and most elusive breakthroughs in clean transportation: the solid-state battery.

Huawei's domestic rival Xiaomi has also entered the solid-state patent race, filing for a layered electrode structure that claims to deliver 1,200 km of range and an 800 km ...

Huawei's lithium battery innovations, particularly in solid-state technology, are reshaping the energy storage and electric vehicle (EV) landscapes. Recent advancements focus on energy ...

Is Huawei's lithium battery a solid-state battery

Huawei is the latest in a growing list of automakers and tech companies that are exploring the possible benefits of fitting an EV with solid ...

A new 1,864-mile solid-state battery from Huawei could transform the EV world and be a real game-changer. Electric car manufacturers have been seeking ways to increase ...

The current ternary lithium battery actually has an energy density of only half of that of the all-solid-state battery, so theoretically, under the ...

Huawei's patent for a sulfide-based solid-state battery with a 3,000km range could reshape electric mobility, and pose a big challenge to other EV makers.

Huawei has filed a patent detailing a sulfide-based solid-state battery design with energy densities between 180 and 225 Wh/lb, roughly two to three times higher than today's typical...

Huawei is making big strides in energy storage with its new solid-state battery technology. The tech leader has recently announced a patent for ...

Is Huawei s lithium battery a solid-state battery
