Are solar panels a good option for your home?

Residential solar panels allow you to pull less energy from the grid. With the addition of solar batteries, solar panels could make your home self-reliant and independent from the electric grid. Solar batteries store energy created during sunny hours, allowing it to be used at night or on cloudy days.

Are solar panels right for You?

Solar panels are best for people who live in good solar states with solar-friendly policies, like net metering and solar incentive programs. Homes with south-facing roofs and lots of unshaded space are also ideal for solar. Homeowners with high electricity bills are among those who can benefit the most from going solar.

Do solar panels add value to your home?

According to the US Department of Energy's Lawrence Berkeley National Laboratory, solar panels can add serious value to your home and sell quicker than homes without solar. A recent study found that, based on the average home cost, homes with solar sell for 6.8% more, adding a value of around \$25,000. Solar panels can add to your home's value.

Where can solar panels be installed?

The roof of your home is the most common site for solar panels -- but it's not the only place they can go. Homeowners who can't get rooftop solar panels can get creative and find another site. Solar panels can be installed on a carport, gazebo, or pergola.

Do I need a new roof for my solar project?

Before installing solar panels, your roof should be inspected to determine if it can withstand the weight. If your roof needs replacement within the next five years, it's recommended to do so before installing solar panels. Otherwise, a new roof is not necessary for a solar project.

What should be inspected before installing solar panels?

Before installing solar panels, your roof will need to be inspected to ensure that it can withstand the weight of planned solar panels, especially if you are due for a roof replacement in the next five years.
