

Mobile Base Station Battery Pack Installation

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

How does a battery backup box work?

A battery backup box for a cordless telephone is designed to connect between the base unit's AC power adapter and the base unit itself. When you have power to your house, power from the base unit's AC power adapter is passed through to the base unit. When you lose AC power, a relay is released, and power to the base unit is then provided by the batteries in the backup box.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

How do you protect a telecom base station?

Backup power systems in telecom base stations often operate for extended periods, making thermal management critical. Key suggestions include: Cooling System: Install fans or heat sinks inside the battery pack to ensure efficient heat dissipation.

How to connect a cordless phone to its base unit?

To connect a cordless phone to its base unit, first, connect the AC power adapter. Then, connect the phone to the base unit via the relay and the connector. When you plug in the AC power adapter, the relay is energized, and voltage from the AC power adapter is passed through the relay's "normally open" contact to the connector which feeds the cordless phone base unit.

How important is the AC power adapter for the base station?

The AC power adapter for the base station is important. If the base unit has power and a phone line, it can supply dial tone to the remote units. In order to use this design, the AC power adapter for the base station must output DC voltage.
