

Addressing the challenge of swiftly establishing effective emergency communication links between ground equipment and external rescue organizations post-disaster, the system ...

Large-scale deployment of 5G base stations has brought severe challenges to the economic operation of the distribution network, furthermore, as a new type of adjustable load, ...

The case study employs the IEEE 14-bus power grid, a 7-node gas network, and an 8-node heat network test system to evaluate the optimal configuration of a city-level multi ...

Considering that users are usually mobile, we model the dynamic distribution of users and use flexible UAVs for capacity enhancement. To better meet the QoS of users, a 3D location ...

Unmanned Aerial Vehicle (UAV) BSs detect UAVs and the environment, including obstacles and illegal UAVs, to ensure the safe flight of UAVs. Multi-BS cooperative sensing to achieve ...

The 5G network with specific bandwidth improved the security of the communication system.

 Result After the completion of the 5G communication system ...

The term "Multi-station" refers to the combined mode of "substation +X." "Integration" refers to the integration of energy, information, and communication fields in business, the coordination of ...

This paper discusses the practical application of an emergency communication network that can be quickly set up, integrated earth observation system with multi-level ...

Integrated sensing and communication (ISAC), which integrates sensing capabilities into wireless communication networks, is emerging as a key technology for future millimeter wave ...

Large-scale deployment of 5G base stations has brought severe challenges to the economic operation of the distribution network, furthermore, ...

Specifically, a multi-functional base station (BS) can enable multi-functional transmissions, by exploiting the same radio signals to perform target/environment sensing, wireless ...

The proposed framework includes a multi-hop communication model in which UAV-IRS units function as mobile relays, establishing strong connections between the affected area ...

Access to reliable communications services is a key factor in any emergency situation. ASTRI has succeeded in producing a mobile base station that allows ...

We design a new EPEC system based on multi-network convergence technology by integrating the above three network carriers. It overcomes the limitations of single network ...

The research on the location deployment of air base station can effectively enhance the flexibility, real-time and adaptability of the network, and get full use of the energy, ...

In contrast to the decision-making process for the public network, the business communication of the VPP relying on the power company has a high degree of network self ...

Wireless communication networks have rapidly evolved over the past few decades. Since terrestrial communication systems are equipped with fixed base stations, when unexpected ...

The design and implementation of Tian-Power's communication backup solution aims to ensure the normal operation of the communication system in the event of a power outage or power ...

The proliferation of small, agile unmanned aerial vehicles (UAVs) has exposed the limits of single-sensor surveillance in cluttered airspace. We propose an Internet of Things ...

Kirisun's high-mountain base stations feature integrated wind and solar power. They require no power lines or wired network access. Whether deployed in remote regions, ...

The proportion of traditional frequency regulation units decreases as renewable energy increases, posing new challenges to the frequency stability of the power system. The ...

This study integrates multi-hop UAV technology with IRS, contributing to the development of a resilient, adaptable, and energy-efficient emergency communication framework.

Multi-network integrated emergency communication base station wind power
