What is Naxtra & Shenxing Superfast charging?

Naxtra, the world's first mass-producible sodium-ion battery, breaks resource constraints and strengthens the foundation of the new energy industry. The second-generation Shenxing Superfast Charging Battery, with its peak 12C charging rate, sets a new global record for superfast charging technology.

Will sodium ion batteries replace lithium phosphate batteries?

CATL's CEO, Robin Zeng, stated his expectation that sodium-ion batteries will displace half of the lithium, iron, and phosphate batteries in the market.

Are lithium ion batteries safe?

Lithium-ion batteries can be hazardous due to their fire risk when damaged. In comparison, sodium-ion batteries offer a more stable and secure way to store energy. As per AFP, the first Naxtra units will be smaller and targeted as starter batteries for heavy-duty vehicles.

Are CATL batteries a viable alternative to lithium ion?

Reuters reported that CATL batteries are found in over 18.32 million cars that are currently on the roads in more than 66 countries. Long seen as a promising alternative to the dominant lithium-ion technology, sodium-ion offers the potential for lower costs and enhanced safety.

Hybrid cooling system with phase change material and liquid microchannels to prevent thermal runaway propagation within lithium-ion battery packs

This breakthrough not only redefines the boundaries of battery technology but also accelerates the global transition to sustainable energy. Here's why this matters for the sodium ...

Naxtra, the world's first mass-producible sodium-ion battery, breaks resource constraints and strengthens the foundation of the new energy industry. The second-generation ...

Then, CATL also released a sodium-ion battery named "NaXin" and launched its first product, the CATL NaXin 24V heavy-duty truck start-stop integrated battery, which is ...

battery to combine 800 km of range with 12C peak charging capability, ...

"Big Battery made converting our 48v lead acid EZGO cart to lithium a breeze. Our cart is lighter, faster and the range went up dramatically using just a single ...

With the popularization of electric vehicles, the problem of safe and fast charging of lithium ion batteries must be settled urgently. The existing fast charging minimize charge time, ...

The dual-core design means the battery pack contains two independent energy zones, featuring five key dual-core functions, including high-pressure, low-pressure, structural, ...

The early detection of soft internal short-circuit faults in lithium-ion battery packs is critical to ensuring the safe and reliable operation of electric vehicles. This article proposes a fault ...

CATL's Naxtra Battery breaks through the performance boundaries of the material itself. With sodium's inherent safety and abundant reserves, it efficiently reduces dependence ...

In 2025, CATL unveiled the Naxtra Sodium-ion Battery platform, officially bringing lithium-free energy storage solutions into mass production. The advancements promise ...

We carry a number of rechargeable lithium ion battery packs. These battery packs are light-weight, eco-friendly, provide long battery life, and are fully PCB protected.

Contemporary Amperex Technology (CATL), which counts Tesla and BMW among its biggest clients, will mass-produce by the end of this year its Naxtra sodium-ion battery ...

With sodium's inherent safety and abundant reserves, it efficiently reduces dependence on lithium resources and strengthens the foundation of new energy technologies, ...
