

New Lithium Battery Pack Pairing Requirements

Can you mix different capacity lithium batteries?

Yes, you can mix different capacity lithium batteries, whether a normal 12V 100Ah battery or a Lithium server rack battery. You can combine different capacity batteries in parallel. You cannot combine different capacity batteries in series. There are a few points you need to consider when wiring in parallel. Let's explore these three points.

When should a lithium battery be connected in series?

You should connect lithium batteries in series when your device requires a higher voltage than a single battery can provide. For example, if your device operates at 7.4V, connecting two 3.7V batteries in series would be appropriate. This setup is commonly used in applications like electric scooters, drones, or other high-voltage devices.

Can you use multiple lithium batteries in parallel?

Here is a diagram for multiple lithium batteries in parallel. You can add individual battery switches after the fuses. From the main busbar, it can go to your inverter, charge controller, or generator. The negative cables can go to a busbar, then a shunt, then another busbar.

How do you test a lithium battery pack?

Voltage and Current Testing: Use a multimeter to ensure the pack operates within safe parameters. Assembling a lithium battery pack requires careful planning, the right tools, and a thorough understanding of series and parallel configurations.

How do you connect a BMS to a battery pack?

Connecting the BMS: B- Terminal: Connect to the main negative (-) terminal of the battery pack. B+ Terminal: Often already connected internally; check your BMS specifications. B1 (or B0): Connect to the most negative point (first cell's negative terminal). B2, B3, ...: Connect sequentially to the positive terminals of each cell in series.

How do I prepare a lithium battery?

Gather Materials: Prepare 3.7V 100mAh lithium cells, connecting wires, a soldering iron, and safety gear. Identify Terminals: Locate the positive (+) and negative (-) terminals on each battery. Prepare the Batteries: Ensure that all batteries are of the same type and charge level to prevent imbalances.
