What is the energy base platform?

The Energy Base platform is designed to deliver gigawatts of long-duration energy storage in harmony with the new energy landscape. The Energy Base's chemistry - mostly iron, salt and water - makes this solution one of the easiest to deploy and maintain. Fast and easy permitting.

How does energy base work?

Energy Base projects can be customized to minimize visual impact and deliver up to 300 MWh/acre energy density. The Energy Base platform is designed to deliver gigawatts of long-duration energy storage in harmony with the new energy landscape.

What is an energy base?

The Energy Base allows the power (the rate of electricity flow) to be decoupled from the capacity (the total amount of energy held). This, combined with unlimited cycling and rapid response time, means that the performance of each Energy Base can be tailored to meet individual customer needs.

Why should you choose ESS for Your Energy BASE project?

ESS has worked closely with leading engineering firms to develop standard, cost-effective design parameters that enable deployment of gigawatt-scale storage. Energy Base projects can be customized to minimize visual impact and deliver up to 300 MWh/acre energy density.

How many hours can the energy base deliver?

You can configure the Energy Base to deliver gigawatts of cost-effective energy storage for 8+ hours. The ability to customize power and discharge durations maximizes project flexibility and delivers cost-efficient energy storage.

What makes the energy base unique?

The Energy Base's chemistry - mostly iron, salt and water - makes this solution one of the easiest to deploy and maintain. Fast and easy permitting. No thermal runaway = minimal fire risk in comparison to other technologies. Safe and sustainable materials that are predominately reusable or recyclable.
