

Nigeria's Power sector has evolved over the years with improved investments by both the government and private businesses, but it is far from ...

Electricity in Nigeria is generated through thermal and hydropower sources. The primary source of electricity generation comes from fossil fuels, especially gas, which accounts for 86% of the capacity in Nigeria, with the remainder generated from hydropower sources. Before the beginning of the Fourth Nigerian republic, power generation was mainly the federal government's responsibility through NEPA. However, reforms started in 2005 with the Electric Power Sector R...
