Why is EV charging a good idea in Norway?

Norway's national grid is powered by 99% renewable energy (wind, solar and hydro electric). Therefore the country's EV charging infrastructure is powered by renewable energy. And Norway's energy is not only clean, but cheap. The country's low electricity prices result in further savings through EV ownership.

How many EV charging stations are there in Norway?

Given the mountainous and often isolated terrain, this is particularly important. To support a network of more than 750,000 EVs there are now almost 27,000 charging stations across Norway. And you won't need to travel more than 30 miles to find your nearest rapid charge point.

How many electric cars are there in Norway?

Current EV Charging Infrastructure As of the first quarter of 2024, Norway boasts approximately 710,000 electric passenger cars, accounting for about 25% of the nation's total passenger car fleet. This high adoption rate is supported by Norway's extensive and well-developed EV charging infrastructure.

Does Norway have a black charging chip?

The Norwegian Electric Car Association also provides members with a black charging chip, in action since 2014, making it possible to start, stop and pay for charging with many operators across the country - and is cheaper than using SMS. Norway's national grid is powered by 99% renewable energy (wind, solar and hydro electric).

Why should Norway invest in EV infrastructure?

By continuing to innovate and invest in EV infrastructure, Norway aims to maintain its position at the forefront of the electric vehicle revolution and drive societal change towards a greener future. Conclusion
