

Norway's wind power supporting energy storage policy

Why is Norwegian Wind power policy construction important?

The emerging changes in technical development and the negative effects of various claims and oppositions make the analysis of the stabilizing and destabilizing forces of Norwegian wind power policy construction particularly relevant to understanding energy transition policy dynamics as well as the emerging questions of energy justice.

Are Norwegian land-based wind power policies based on Energy Justice?

Aspects of energy justice are emerging in Norwegian wind power policies. This paper employs an assemblage theoretical approach to analyse how Norwegian land-based wind power policies are constructed over time and what forces dominate and resist wind power policy development.

Does Norway need a wind power system?

To meet Norway's growing energy demand, a combination of onshore wind, solar PV, and eventually offshore wind, backed by policy, will support growth in demand for electricity for use in Norway and for export.

Is offshore wind power a niche development in Norway?

Given the fact Norwegian society is highly electrified and hydropower has been a long-established energy source, interest in new niche development in renewables has been lower in Norway than in the other case countries. However, alongside solar power and energy storage, offshore wind power began to attract more attention since 2022.

Are Norwegian Wind Power Policies at a crossroads?

Norwegian wind power policies are at a crossroads. Arguments on energy security, climate mitigation, market conditions and efficiency are challenged by broad public contestations concerning environmental and nature values, local participation and transparency, and the distribution of burdens and goods.

What happened to wind power in Norway?

The protests and opposition resulted in a freeze of new wind power permissions from 2019 until 2022, when the European energy crisis somewhat changed the outlook on wind power in Norway. Further, some experts interviewed mentioned the intention by some to physically damage new wind power development sites:

Further support for some degree of securitization are the exceptional measures taken during 2022-2023 as part of Norway's energy policy: the more visible military presence safeguarding ...

Here we also used four statements which all, in different ways, support the role and potential of wind power in Norway's energy needs. Those who are generally in favor of wind power are in ...

Norway's wind power supporting energy storage policy

Grid Integration: Large-scale offshore wind energy production needs efficient integration into Norway's existing power grid. The intermittency ...

Norway's pumped storage, by making energy dispatchable, could play a crucial role in balancing supply and demand across Europe. Thanks to its ability to regulate surplus energy produced ...

Norway: Norway's windpower trajectory testifies to the nation's transition from hydropower dominance. An unexpected windpower boom that originally fuelled local ...

To replace a large quantity of natural gas with power made from renewable energy sources before 2030, the renewable power production and transmission capacities must be expanded, with ...

We're taking another step in supporting Norway's renewable energy infrastructure with the Illvatn pumped storage plant in Luster. Hydro and the wider industry need more ...

The Energy Commission has been led by Professor Lars Særgard, the former Director General of the Norwegian Competition Authority with the main tasks to assess ...

If you've ever wondered how wind farms avoid becoming "all talk, no action" energy sources, you're not alone. This article is for renewable energy developers, ...

On Friday 11 June 2021, the Norwegian Government approved a long-awaited white paper. The document is titled "Putting Energy to Work", and contains the ...

This paper employs an assemblage theoretical approach to analyse how Norwegian land-based wind power policies are constructed over time and what forces dominate and resist ...

small contribution in Norway. Existing hydropower can be modernized for greater output. Combining pumped storage solutions makes hydropower an even better partner for variable ...

Credit: Ida Wullum-Lindberg/Norad 27 new projects will receive a total of NOK 248 million under the enterprise development scheme for renewable energy. Projects include gas ...

On Friday 11 June 2021, the Norwegian Government approved a long-awaited white paper. The document is titled "Putting Energy to Work", and contains the most recent and updated policy ...

Norwegian position on the proposed EU framework for climate and energy policies towards 2030 The EU plays an important role as a global leader in climate policy and has a fundamental ...

The electrical energy produced by the 64 active wind farms in 2021 was 11.8 TWh. That is an increase of 19%

Norway s wind power supporting energy storage policy

from the year before, despite lower-than-normal wind resource availability. ...

The renewable energy market in Norway has been through a period of extensive political debate about the future of renewable energy, which has resulted in the introduction of ...

Aspects of energy justice are emerging in Norwegian wind power policies. This paper employs an assemblage theoretical approach to analyse how Norwegian land-based wind ...
