

What is a portable power distribution unit?

It has been designed according to the North American needs of temporary power distribution systems, especially outdoor atmospheric conditions and safety measures. Portable Power Distribution Units are sized based on current draw and will come with the appropriate circuit protection devices.

What is a power distribution box?

Electric power is an essential element of every building and event, power distribution is the final delivery point of electricity. To make power safe and readily available for multiple users a rugged power distribution box is a good solution. Power Distribution Units (PDU) are often referred to as a Spider Box, Pagoda Box or a Circuit Box.

What is a modern modern power distribution system?

The main objective of a modern modern power distribution system is to provide quality and uninterrupted power supply to the buildings so that there is no disruption to the productive operation of various services operating in the building to ensure human comfort.

How much does a power distribution unit cost?

Furthermore, the design needs to be economical, there are so many variations and specifications to follow that consumers may choose the wrong set-up for their needs. A typical domestic-level Power Distribution Unit costs around \$600, whereas the cost of a commercial scale PDU can cost in upwards of \$2000.

What happens to a power supply during a storm?

During winds, cyclones and storms, the entire distribution system including poles, and conductors collapse taking long time to restore the power supply. The indoor substations work at much lower ambient, say at 28 Degree C, when the outside temperature may be above 40 degree C.

What is a rugged power distribution box?

To make power safe and readily available for multiple users a rugged power distribution box is a good solution. Power Distribution Units (PDU) are often referred to as a Spider Box, Pagoda Box or a Circuit Box. For the sake of this article we will refer to them as PDU's.
