Are outdoor electrical systems safe?

From outdoor lighting and security systems to pools, spas, and garden tools, we rely on electricity to enhance our time spent outdoors. However, outdoor electrical systems come with their own set of safety risks, especially when exposed to the elements.

How do I use a power tool outside?

Follow these guidelines before, during and after operating a power tool outdoors: Read the tool's instructions, especially all safety warnings, before use. Plug the cord into a three-prong outlet on a three-conductor circuit. This provides the added safety of the neutral-to-ground connection provided by the third wire.

Do outdoor electrical systems need to be inspected?

For example, pool lights and pumps need to be regularly inspected to ensure they are properly grounded and operating safely. At Thomas Edison Electric, we specialize in outdoor electrical safety and can help ensure your home's outdoor electrical systems are up to code and safe to use.

What happens if a power outlet is not protected?

Without this level of protection, water can easily seep into the outlet and cause short circuits or electrical fires. Over time, outlet covers can become cracked or broken, so be sure to inspect them regularly. If you notice any signs of damage or wear, replace them immediately.

How can I protect my home from electric shock?

Prevent the risk of electric shock by keeping the following in mind when playing or working outdoors near power lines: Install your satellite dish as far from electric lines as possible, preferably at the opposite end of the house. Never let children fly kites, motorized airplanes or drones near power lines.

How do you maintain a power tool?

Inspect the tool after each use, and keep it in good working order. Replace or repair worn or defective equipment immediately. Keep the tool clean and store it in a dry place. Never use a power tool around flammable liquids such as gasoline or solvents. Keep the work area clean of sawdust, shavings or anything else that could pose a fire hazard.

Posted on November 15, 2016 in Electrical Part P of the Building Regulations which introduce building control requirements in relation to electrical safety came into effect on the 1st January ...
