Are solar panels right for You?

The right solar panel turns any campsite or road stop into a mobile office, a quiet retreat, and a home-away-from-home. Liberating you from the noise of a gassy generator, solar panels offer the freedom to roam -- to charge your laptop, run your electric cooler, and store electricity overnight in a power station.

Are portable solar panels more mobile?

Some portable solar panels are more mobile than others. The panels that can produce the amount of electricity that you need to power many devices and/or appliances are generally quite large—at least a few feet across and a foot or two high: A larger panel allows you to absorb more energy.

Which solar panel is best for camping and off-grid living?

The Jackery SolarSaga 100 offers the best overall value for a large solar panel for camping and off-grid living. This panel isn't the least expensive model we tested, nor is it the most expensive, but its performance and efficiency are consistently some of the best we've seen.

Should you use solar energy in your garden?

Harnessing solar energy in your garden is an eco-friendly way to power your outdoor space while reducing electricity costs. From solar-powered lights that create a magical ambiance to water features and irrigation systems that run efficiently without traditional power sources, there are countless ways to integrate solar technology into your garden.

Which solar generator should I Choose?

If your solar generator needs to provide a steady stream of power for a hungry campsite or home, you'll need to go with larger, high-wattage panels that can absorb enough energy to keep the lights on. For maximum potential, I think EcoFlow's 400W panel is the best high-wattage option that still feels genuinely portable.

Are high wattage solar panels a good choice?

Heavier high-wattage panels tend to be a little more fragile than foldable and/or flexible panels. The further off the beaten path they need to travel, the more important it is to sacrifice wattage for durability. I've tested dozens of portable solar panels over the past five years.
