

Is peak shaving a viable strategy for battery energy storage?

Amid these pressing challenges, the concept of peak shaving emerges as a promising strategy, particularly when harnessed through battery energy storage systems (BESSs, Figure 1). These systems offer a dynamic solution by capturing excess energy during off-peak hours and releasing it strategically during peak demand periods.

Should energy storage system be used for peak shaving?

An energy storage system (ESS) application is more advantageous than the demand response program, where it allows customers to simultaneously shave peak load and perform daily activities as usual. Therefore, future research should emphasise on the proper application of DSM with ESS system for peak shaving purpose. 6.

Is peak shaving a viable strategy for grid operators?

If left unchecked, peak demand periods might see grid operators grappling with shortages that could surpass current levels by 10% or more. Amid these pressing challenges, the concept of peak shaving emerges as a promising strategy, particularly when harnessed through battery energy storage systems (BESSs, Figure 1).

Which energy storage technology is used for peak load shaving?

Among various energy storage technologies, electrochemical technology based BESS is mostly used for peak load shaving. The use of different battery energy storage technologies for peak shaving can be found in the previous literature ,,,,,,.

Can peak shaving reshape the energy landscape?

By implementing innovative solutions such as peak shaving through BESSs, the energy landscape can be transformed. With potential reductions in peak consumption, significant cost savings, improved grid stability, and tangible environmental benefits, peak shaving demonstrates its potential to be a pivotal strategy in reshaping our energy future.
