What is power plant & power station?

A power plant or power station is defined as an industrial facility where electricity is produced using various energy sources such as fossil fuels, nuclear energy, or renewables like wind and solar. The primary function of these facilities is to convert different forms of energy into electrical energy for distribution.

What does a powerhouse & substation technician do?

Powerhouse and substation technicians or electricians play an important role in making sure power is generated safely and relayed from power stations and substations. There are three different areas in which these electricians may work: The powerhouse. This is the actual power plant or station that generates AC electricity.
