More than just a battery, GM's Rechargeable Energy Storage System (RESS) is a battery management solution including integrated control module connections and available liquid-thermal management system. POWER. SIMPLIFIED. For flexibility in power and installation arrangements, GM offers three Li-Ion RESS designs.

What is a RESS device?

Within a RESS (Rechargeable Energy Storage System), devices that conduct or control energy are crucial components. This work aims to study and analyze potential hazards resulting from electrical or electronic failures impacting vehicles equipped with a RESS.

What is a Reess battery pack?

"REESS" means the rechargeable energy storage system that provides electric energy for electric propulsion of the vehicle. Battery Management System (BMS) and Battery Pack are the two main components of the REESS. As UNECE mentions on the document titled Terminology related to REESS a battery pack may be considered as a REESS if BMS is integrated.

What is the energy storage component of a RESS?

The energy storage component of a RESS is typically an electrochemical battery pack consisting of multiple battery cells arranged in modules.
