

Scope of use of energy storage power in Bolivia

What type of energy system does Bolivia use?

Similar to the country's total energy system, the power sector relies heavily on natural gas (AETN, 2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

What are the policy guidelines for the energy sector in Bolivia?

The Bolivian government has established the following policy guidelines for the energy sector: energy sovereignty, energy security, energy universalization, energy efficiency, industrialization, energy integration, and strengthening of the energy sector (MHE, 2014).

Will Electric based heating drive the transition in Bolivia?

Heating demand in Bolivia transitions from a system dominated by natural gas and biomass to a largely electrified heating sector. Because of the low cost of renewable electricity, electric based heating will drive the transition for Bolivia's heat sector. Fig. 13.

Why are large hydropower installations planned in Bolivia?

Moreover, large hydropower installations planned by the Bolivian government is intended to produce export electricity, rather than for use within Bolivia (MHE, 2009).

What is the storage capacity supply for heat and electricity?

Fig. 17 shows the storage capacity supply for heat and electricity by storage type. Electricity storage provides energy output of 29.6 TWh el, 28.9 TWh el and 29.5 TWh el and heat storage provides 105 TWh th, 104 TWh th, and 81 TWh th for BPS-1, BPS-2, and BPS-3, respectively.

How does sectoral breakdown affect a country's energy needs?

The sectoral breakdown of a country's energy demand, which is based on its economy, geography and history, can greatly impact its energy needs and which energy sources it relies on to meet those needs- such as fueling automobiles, heating or cooling homes or running factories.
